

# Project Group Picture Final Presentation

Group 9

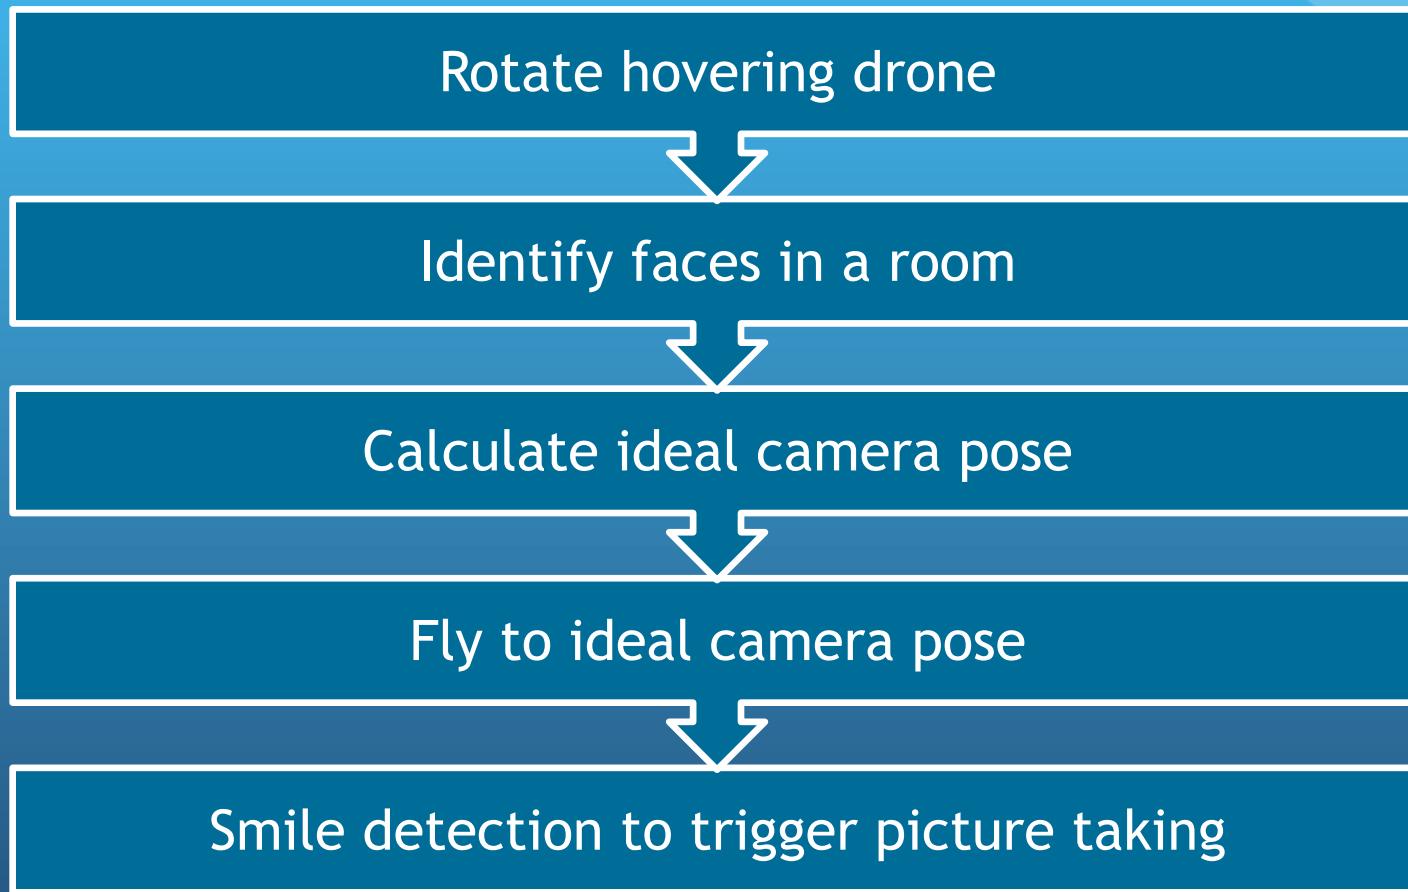

George Popescu | Julian Tatsch | Katrin Kehrbusch

# Idea Revisited

- Take aerial group pictures
- a fresh perspective
- unobstructive

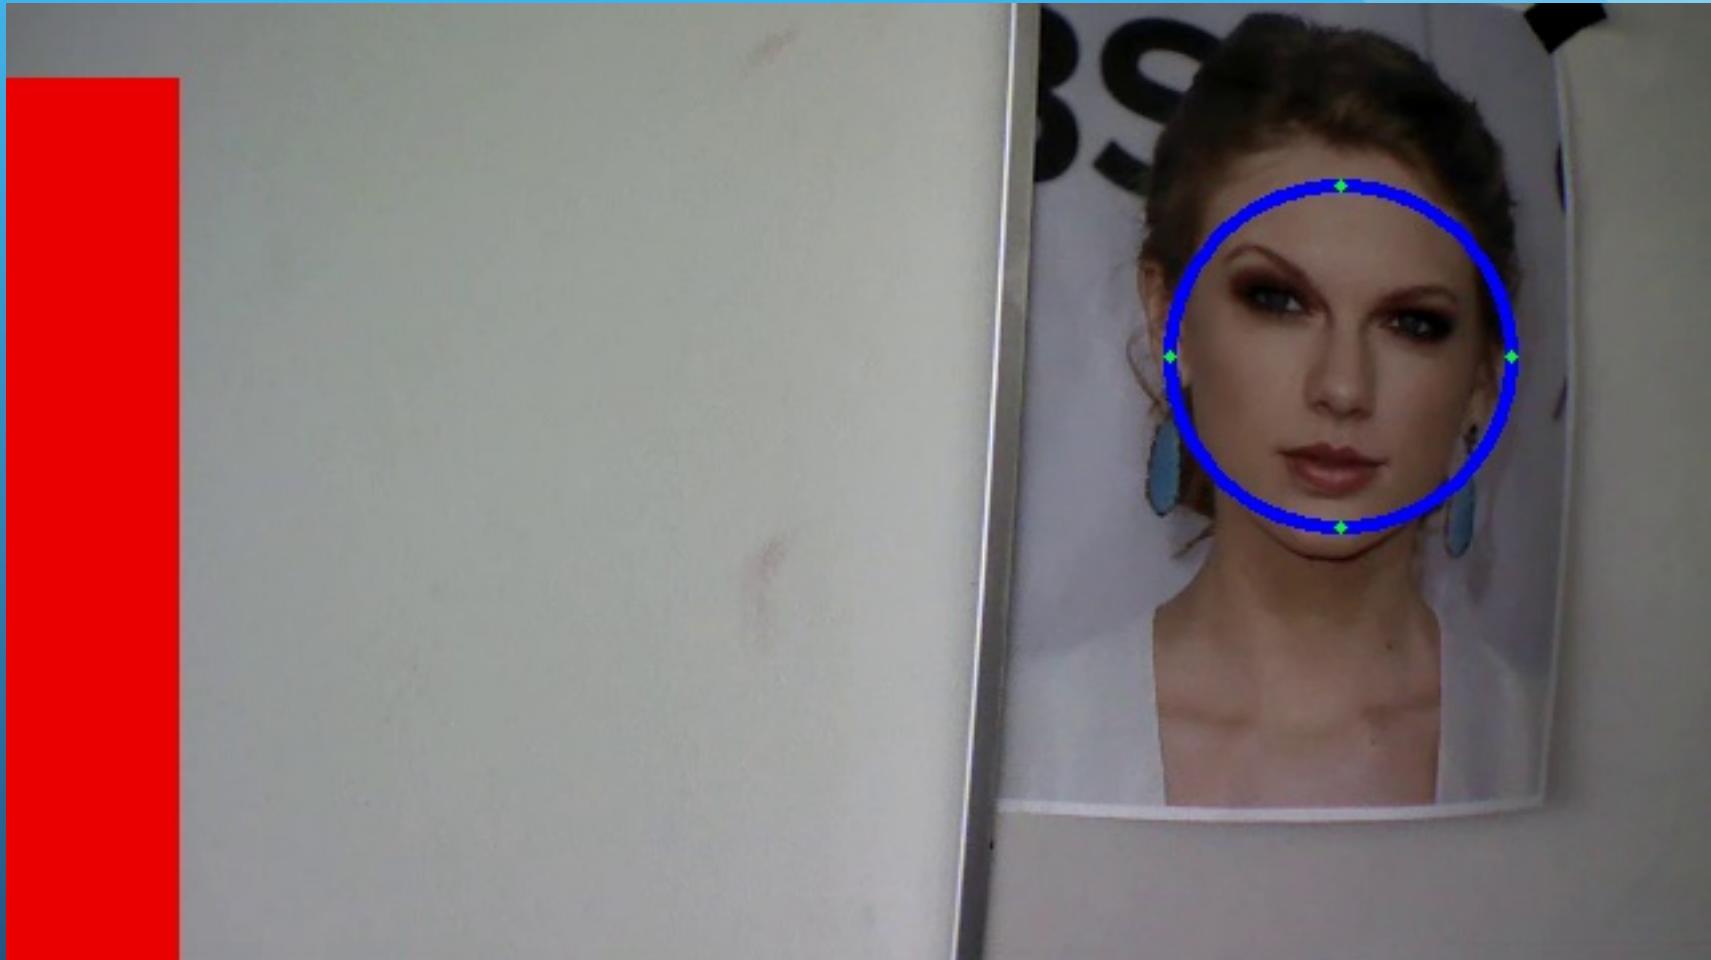

# Status Update

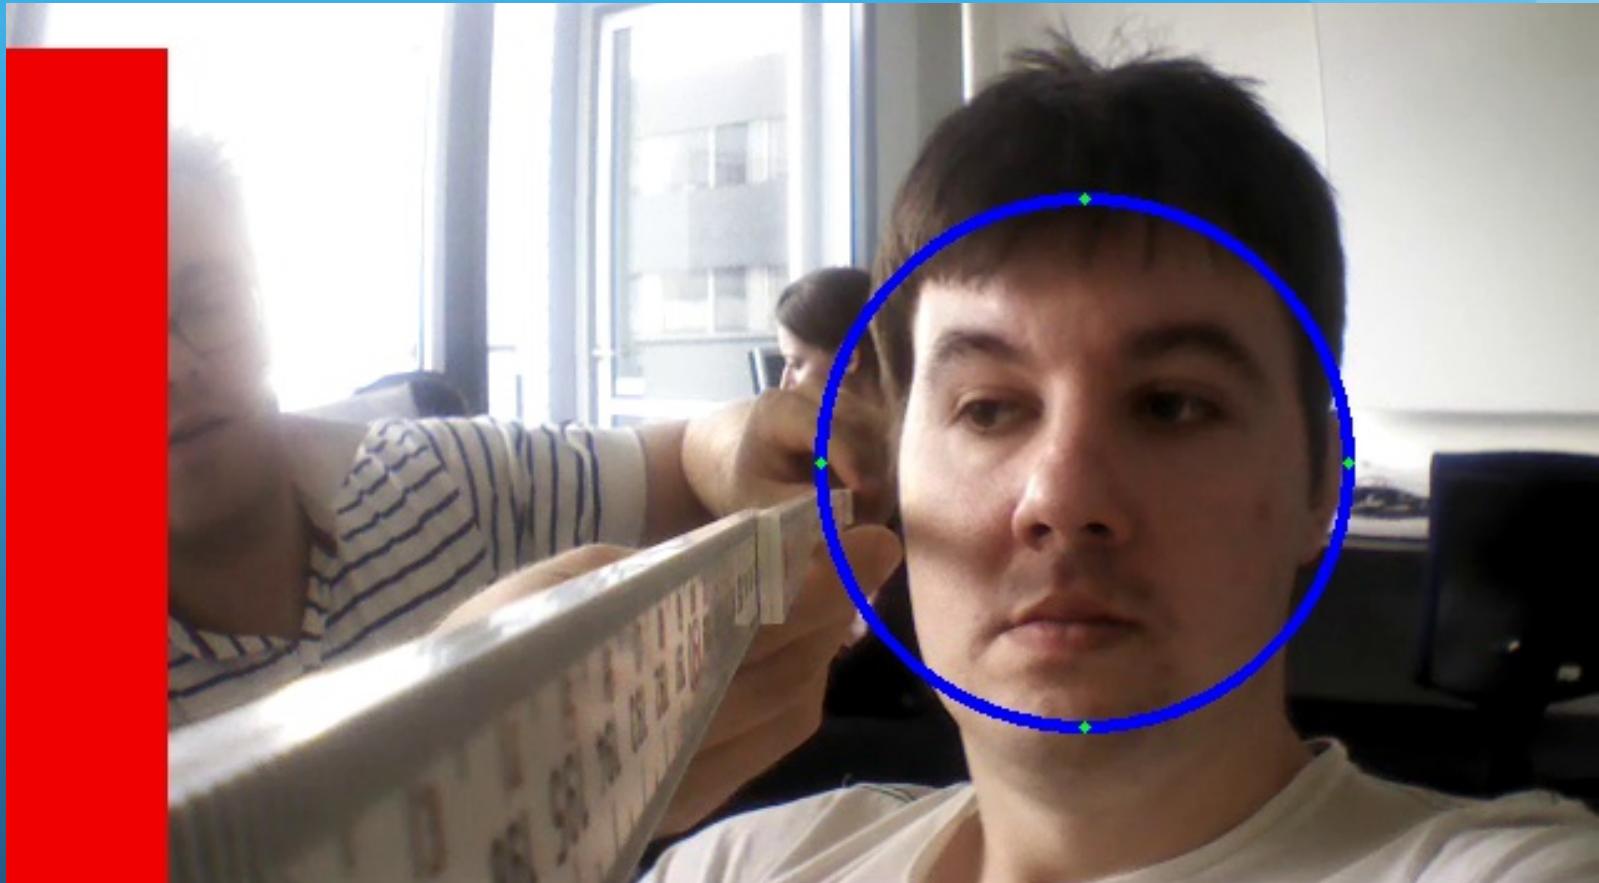

# Face- / Smiledetection

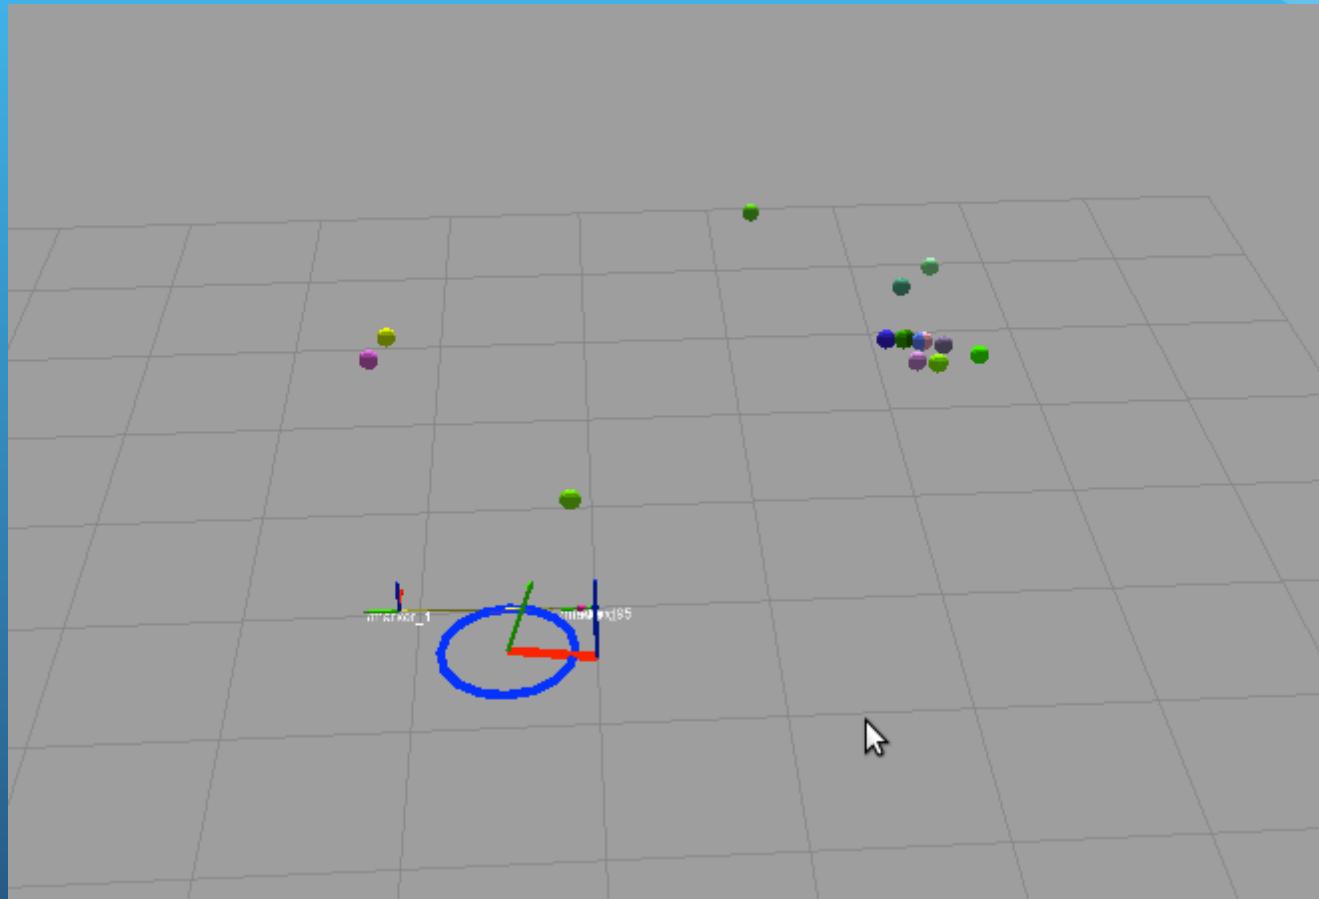

Sadly nobody wanted to be the test person ...

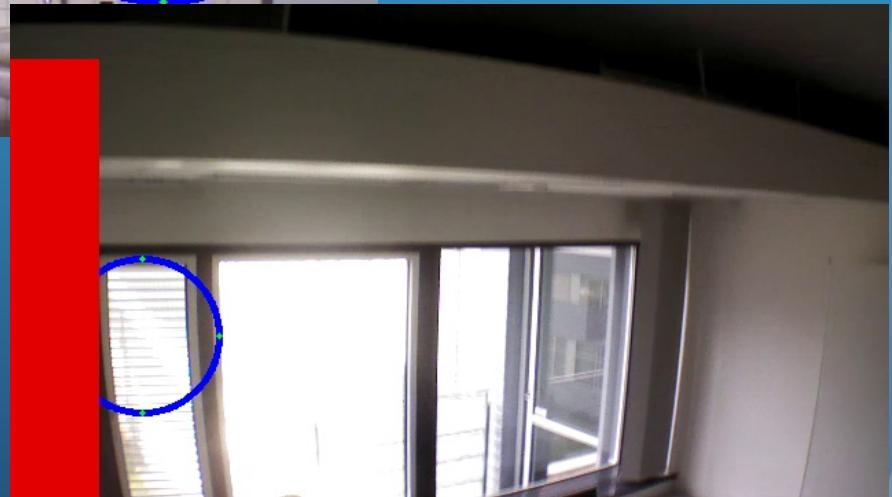

# Double checking the face poses

# Groups of faces

# But in real life

# Demo Video

# Lessons Learned

- Everything depends on the precision of the positioning and the position controller
- Better solutions are needed to reduce the lag of the controller
- Facedetection cascades should be retrained with some more negatives (windows, roller blinds, office chair legs)

# Feedback
