Practical Course: Vision-based Navigation Summer term 2015

Welcome

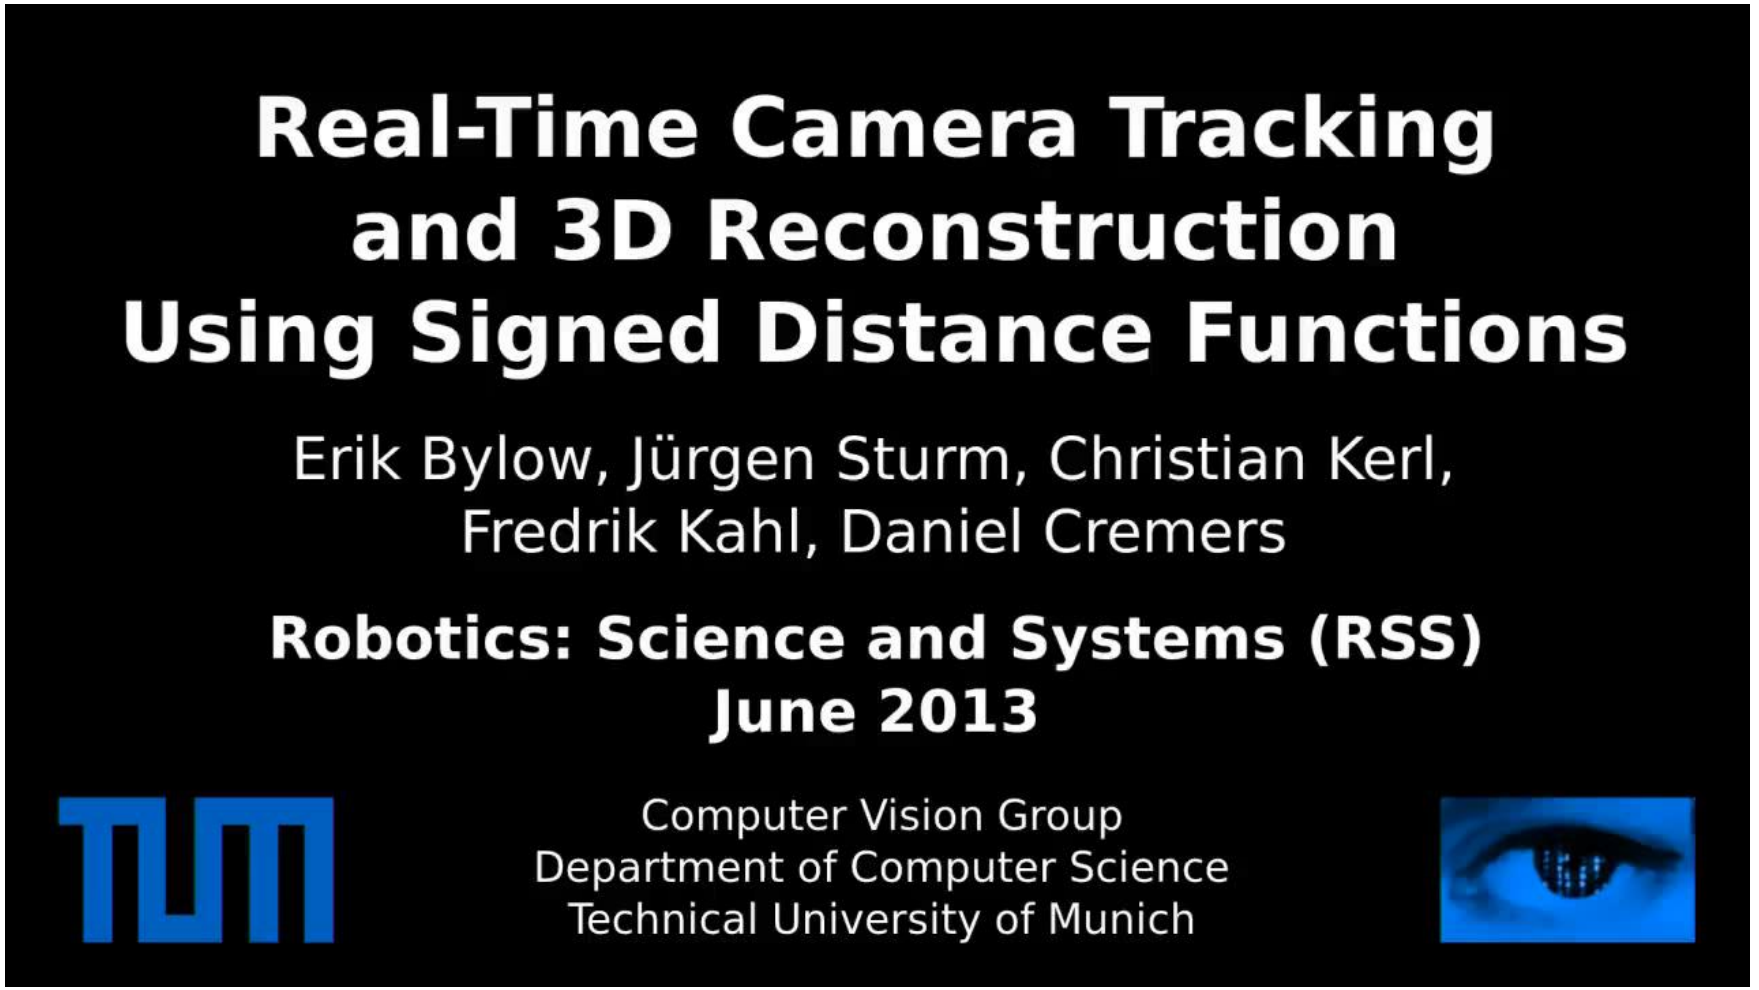
Dr. Jörg Stückler, Vladyslav Usenko,
Jakob Engel, Prof. Dr. Daniel Cremers

Fork Lift Robots (2010)

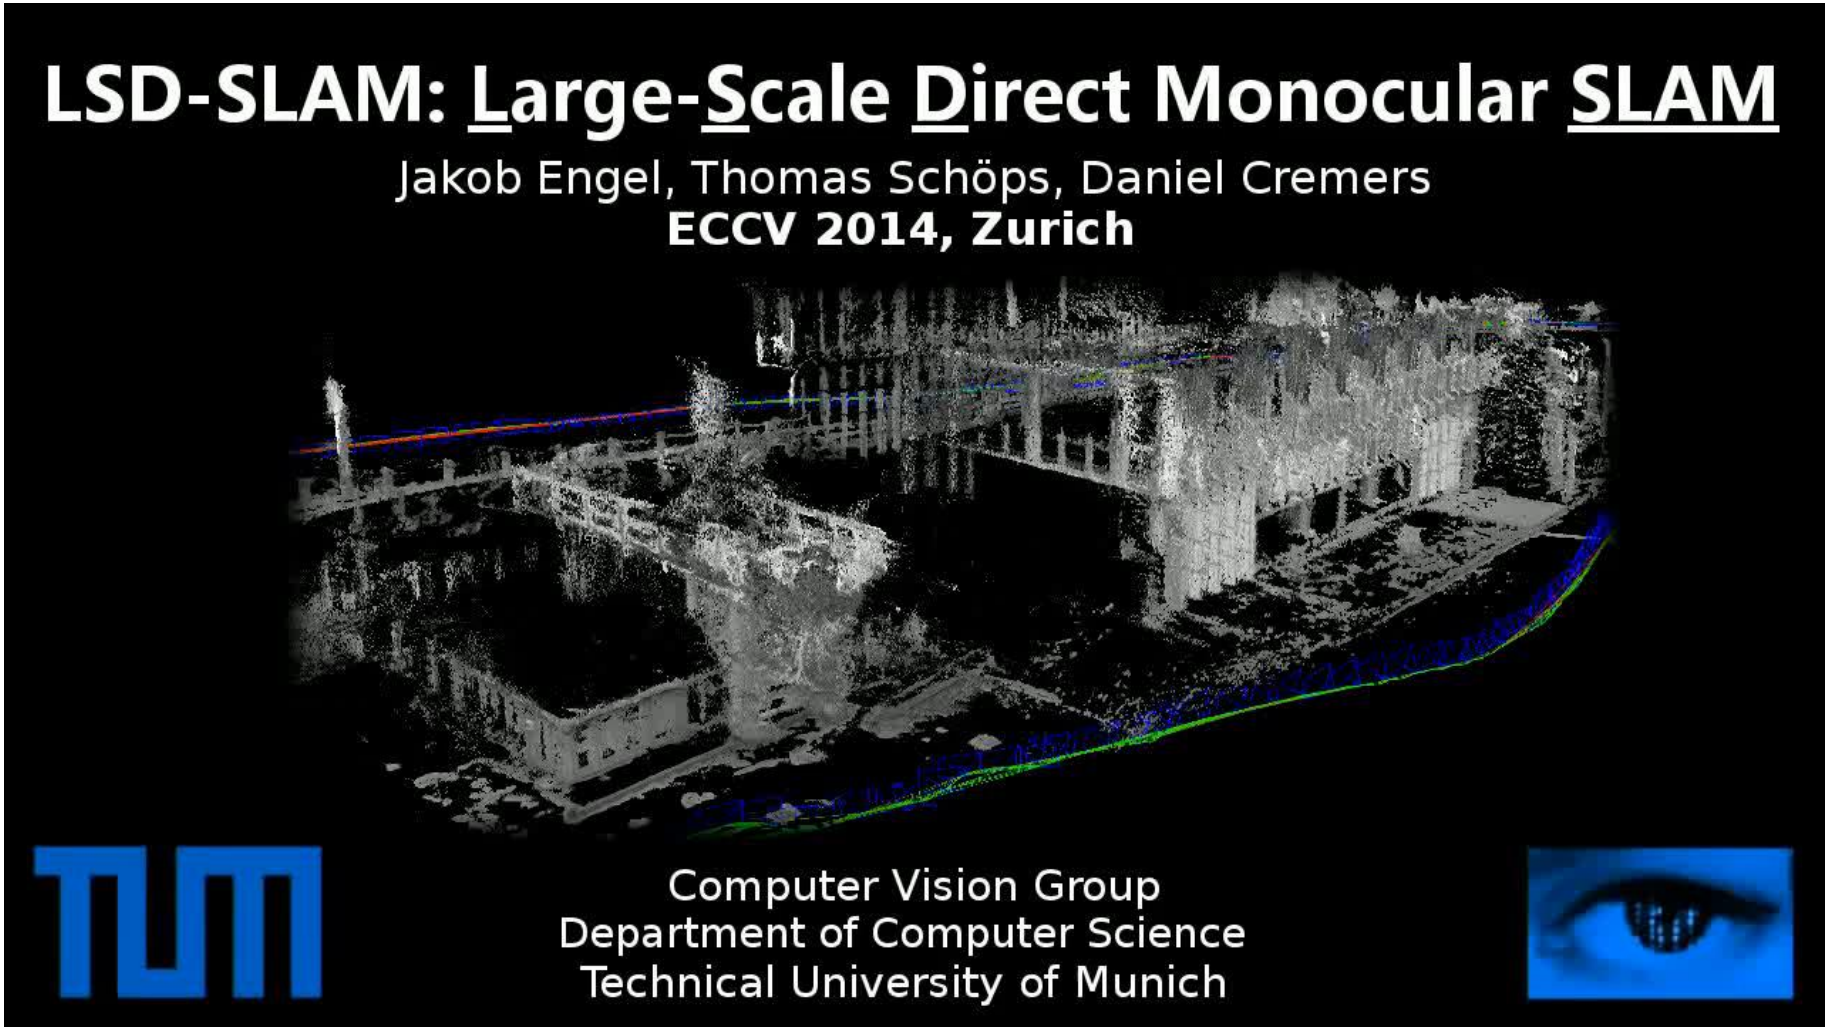
Vision-based Quadrotor Navigation (2011)

Autonomous Construction (2011)

Real-Time RGB-D SLAM with Quadrotors (2013)



Real-Time SLAM with a Single Camera (2014)



Current Trends in Robotics

- Robot technology becomes increasingly mature for applications
- Beyond preprogrammed motions of static robot arms

- Novel application domains
  - Shop floor logistics
  - Human-robot collaboration in industrial settings
  - Domestic service robots
  - Autonomous cars
  - Aerial inspection/maintenance

- Vision sensors provide rich information
  - How to make use of it for robots?

Content of this Course

- You can gain practical experience with
  - Visual odometry and localization/state estimation
  - Vision-based Simultaneous Localization and Mapping (SLAM)
  - Vision-based control of quadrocopters or wheeled robots
- Implementation of algorithms
- Benefits/drawbacks of specific methods when applied to concrete, relevant problems
- Learn how to work in teams/on projects
- Improve your presentation skills

Course Organisation

- Course takes place during the lecture period
- Registration in TUM Online (by matched/accepted students)

- Initial phase (first 4-5 weeks): Lectures & Exercises
  - Lectures: Mondays 1pm to 3pm in seminar room 02.09.023
  - Tutored exercises: Mondays 3pm to 5pm in lab 02.05.014
  - Programming assignments will be handed out every week and checked/graded by the tutors
  - Small groups, each participant should be able to explain solution
  - Attendance to lecture & exercise sessions mandatory

- Second phase (remainder): Project
  - Work in small groups (2-3 people) on a project
  - Lab 02.05.014 available; tutors available Mondays 1pm-5pm
  - Implement a specific algorithm, which one tbd.
  - Present project outcome in talk&demo session (15min per group)
  - Written report on project outcome (10-12 pages, single column, single-spaced lines, 11 pt)

Course Requirements

- Good knowledge of the C/C++ language and basic mathematics such as linear algebra, analysis, stochastics, and numerics is required

- Prior practical knowledge in CUDA programming, robotics, and computer vision topics is a plus

- Participation in at least one of the following lectures of the TUM Computer Vision Group: Variational Methods for Computer Vision, Multiple View Geometry, Autonomous Navigation for Flying Robots. Similar lectures can also be accepted

Warning

- Micro Aerial Vehicles (MAVs) are dangerous objects
- Read the instructions carefully before you start
- Always use the protective hull
- If somebody gets injured, report to us so that we can improve safety guidelines
- If something gets damaged, report it to us so that we can fix it
- Don’t fly MAVs outdoors or above persons
- **NEVER TOUCH THE PROPELLORS**
- **DO NOT TRY TO CATCH THE QUADROCOPTER WHEN IT FAILS – LET IT FALL/CRASH!**

Questions ?
