4. Relative Map Formulation for SLAM

- Change the map formulation to the relative one
 - Parameters are relative poses between keyframes
 - All points are defined relative to some frame
- Extend either SfM or Odometry application

5. Photometric Bundle Adjustment

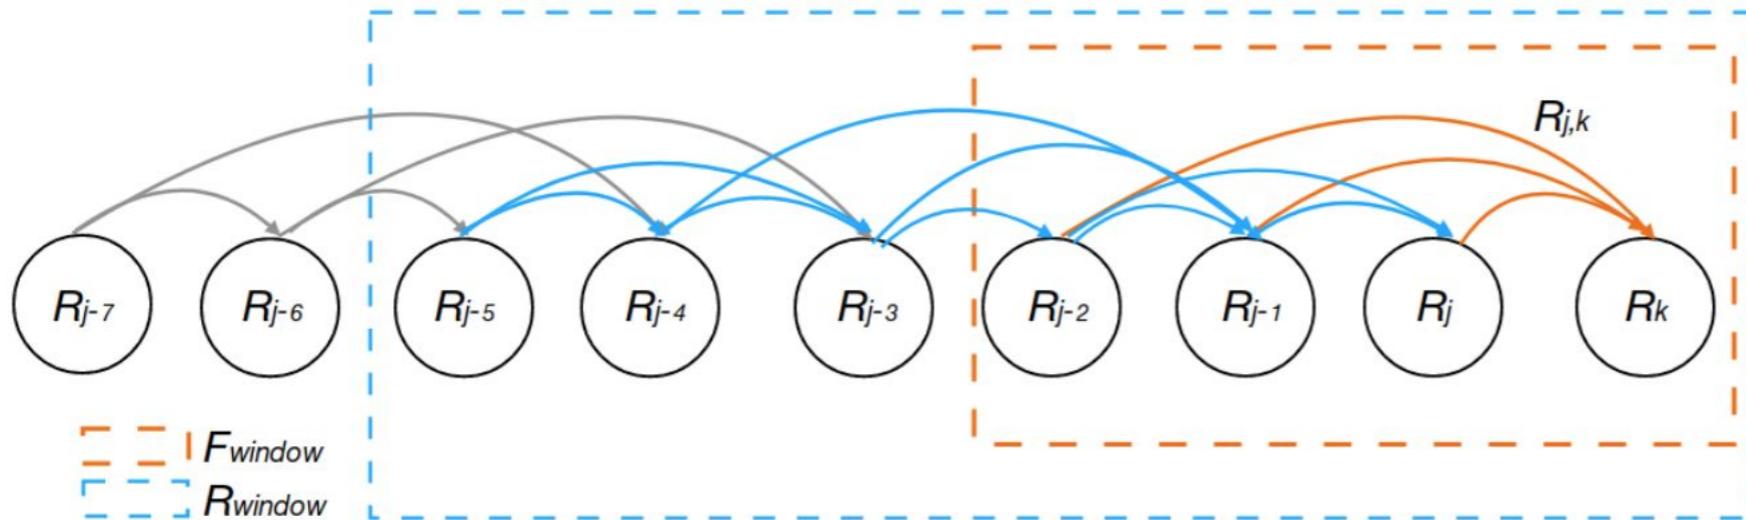

$$E_{\mathbf{p}j} := \sum_{\mathbf{p} \in \mathcal{N}_{\mathbf{p}}} w_{\mathbf{p}} \left\| \left(I_j[\mathbf{p}'] - b_j \right) - \frac{t_j e^{a_j}}{t_i e^{a_i}} \left(I_i[\mathbf{p}] - b_i \right) \right\|_{\gamma}$$

- Photometric Bundle adjustment in SFM
 - Error metric similar to DSO (<https://arxiv.org/pdf/1607.02565.pdf>)
 - Initialize and optimize additional (non-feature) points
 - Possibly use vignetting and response
- Very advanced: extend a recent DSO implementation (<https://github.com/RoadlyInc/DSOPP>) to stereo, or change its map representation. This project does not rely on your current code framework, and hence requires significant additional effort.
